Enabling the Modern Workplace

# Lucidity 365 = Modern Workspace

The workplace is changing. The modern workforce demand a responsive IT experience. They need video conferencing and offline access to company documents so they can work on them on the move. They also need to be connected and integrated to the rest of the business when required. Access from the different mobile platforms is a must.

The Managed Desktop solution Lucidity have provided for nearly two decades has solved the problem of delivering legacy IT applications to users in all different regions, however the need for this traditional world to keep up with modern world applications is required now more than ever.

Lucidity have implemented our own 'Workspace' solution based on Office 365 to bridge the gap between your legacy applications and the modern worker with modern IT requirements.

Welcome the Modern Workspace.

# Traditional Experience

Remote desktop technology has been a common platform in delivering IT systems across the world over the past 20 years. It allows for the complex application requirements of the business to be configured and managed in a central way, providing remote access from anywhere over the internet.

The security of central management, but the portability to access it anywhere.

Remote Desktop is and continues to be a cost effective way of delivering IT, but not without some limitations in the modern age. Remote desktop solutions are not ideal for video/audio or conferencing and telephony. And if you're offline as a mobile user; you're offline.

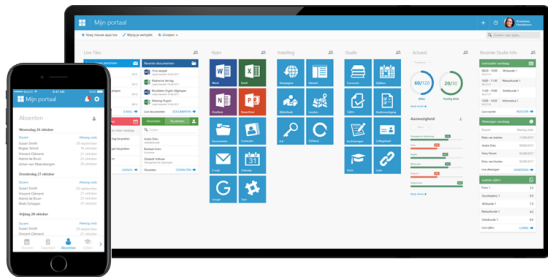

Office 365 has brought a mobile Microsoft Office experience to the table to help bridge the gap. Lucidity integrated Office 365 in to our Managed Desktop platform to start taking advantage of true Hybrid Cloud.

# The Modern Workspace Experience

Lucidity 365 provides you with a modern, browser based workspace to access all of your documents and systems. Integrated with Office 365, all your emails, OneDrive documents and web based applications are accessed through one simple web page across any type of device.

Lucidity 365 also integrates all your Managed Desktop documents and file systems through the platform so you can seamlessly collaborate with the rest of the business on Managed Desktop, but work in a modern way using your local computer and Microsoft Office.

Legacy applications can be delivered through Managed Desktop, or seamlessly as browser tabs and can utilise Microsoft Azure or Lucidity's local infrastructure for scalability. Power BI Dashboards can be published on your workspace giving you instant real time access to your key business metrics.

# Integrated Experience

Lucidity are mindful that a business wanting to modernise their workplace often can't just throw out the traditional Managed Desktop as it still is the right solution for many different areas of the business.  
E.g. Thin clients in factories and workshops providing access to core stock systems.

That's why Lucidity has worked to build an integrated solution that provides our customers with the best of both worlds. Business workers can access their complex application requirements day to day, while mobile workers can enjoy the more modern multimedia desktop experience while remaining in sync.

Traditional Desktop

 Office 365

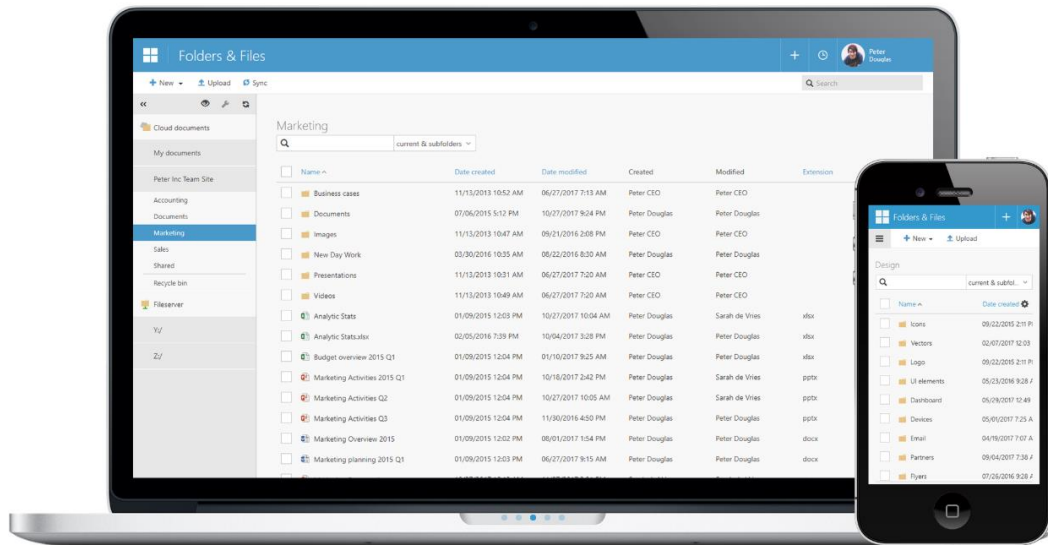

Modern Workspace

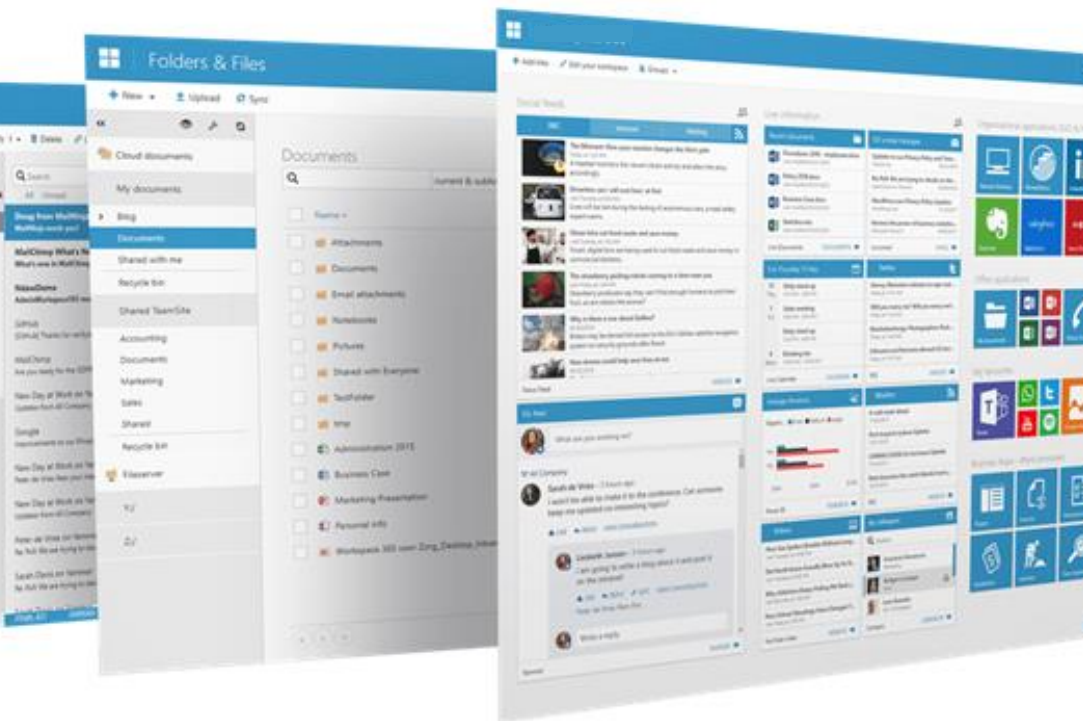

# All your documents together

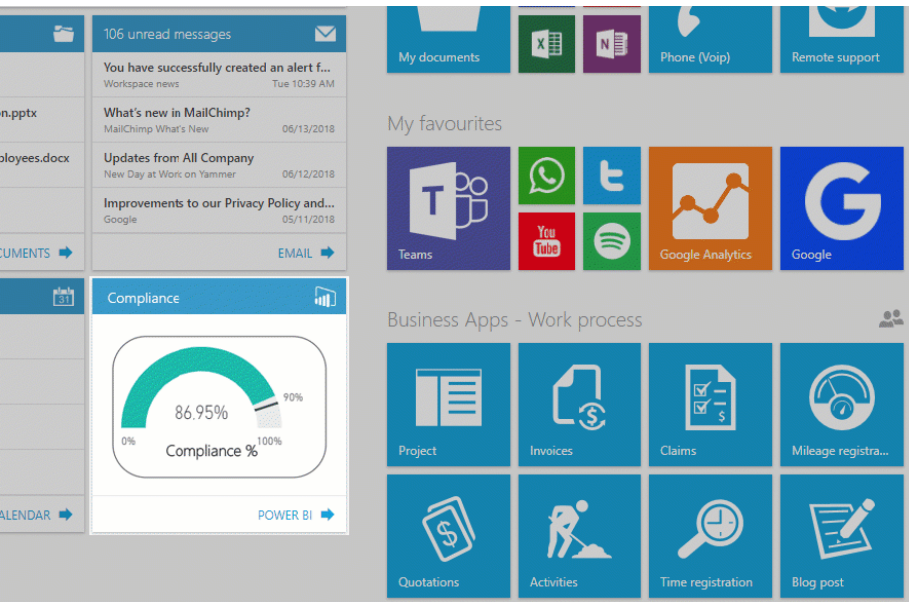

- Lucidity365 brings all your disparate document locations together in one simple to use system.
- You can open documents in online versions of Office 365, or with Office Pro installed locally on your PC.
- You can sync documents locally to use offline across multiple different cloud file systems.
- If you are on Managed Desktop, your company files and folders are right there and accessible besides your Office 365 OneDrive and SharePoint documents.
- Files and folders can integrate directly in to Microsoft Teams.

# Your Modern Workspace

- Works with all Office 365 plans to suit all user types.
- Easily launch office documents in the browser or with Office 2016 Pro Plus installed locally.
- Add role based 'launch groups' to publish everything your users need in one place. Manage this centrally.
- Users can self-service add/remove applications from the App Store like on their mobile devices.
- Leverage Azure SSO to provide a true one login experience to all a companies internal and external applications.
- Documents are integrated with the traditional Managed Desktop file system for seamless integration.

# Integrated Email and Data Visuals

- Bring key business metrics directly to your workspace with Power BI tiles that can give you real time visuals over your business performance. Lucidity can work with you to tailor any Power BI reports you may want to make available.
- Create your own web tiles and 'widgets' and publish on your workspace however you want.
- Bring the mobile phone app store concept to your business applications. Let users organize and arrange their workspaces how they want.
- You can add RSS news feeds from external news sites as well as systems in your business.
- Bring Yammer and Teams chat straight to a 'live tile' on your Lucidity365 workspace.

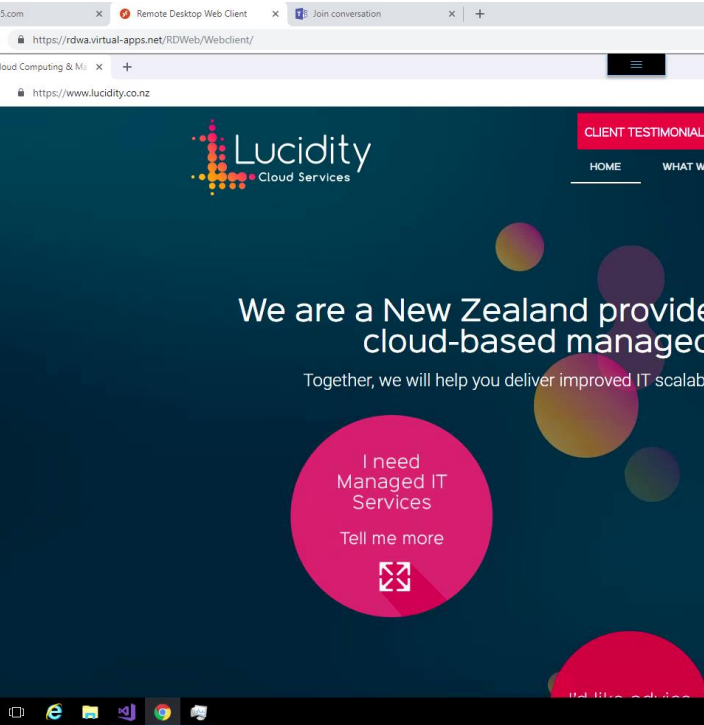

# Single Sign On – Multi Factor

- One single log on to all your business systems. Once you are authenticated with Office 365, you need not remember another password again.
- Lucidity will take your current web applications that all have their own sign ins and passwords and integrate them into your workspace with Azure Active Directory technology. Your one sign on will automatically and securely authenticate you to other web applications inside, and outside of your business.
- You no longer have to have all your users managing their own passwords for external systems. You can completely manage the process so no staff ever have to know the third party website password. Its all automatically taken care of and logged when the applications are accessed through the workspace.
- You can turn on Office 365 Multi Factor Authentication, and know that you are truly securing all your systems, inside and outside your business.

# Legacy Applications

- Access remote desktop applications directly from the Lucidity 365 workspace in a web browser tab.
- Open legacy applications inside a web browser tab without installing any additional software.
- Lucidity can integrate with Managed Desktop or utilise Microsoft Azure Virtual Desktop to deliver legacy applications seamlessly within the workspace.
- Share your traditional file system between Lucidity 365 documents, and the legacy applications that generate data and still need a traditional file server to function.

Lucidity are experts in legacy application hosting. We have run hundreds of remote desktop servers and Windows applications for customers successfully in New Zealand for over 17 years. Lucidity 365 allows us to deliver a truly converged Hybrid Cloud Modern Workplace solution.

# Modern Collaboration Experience

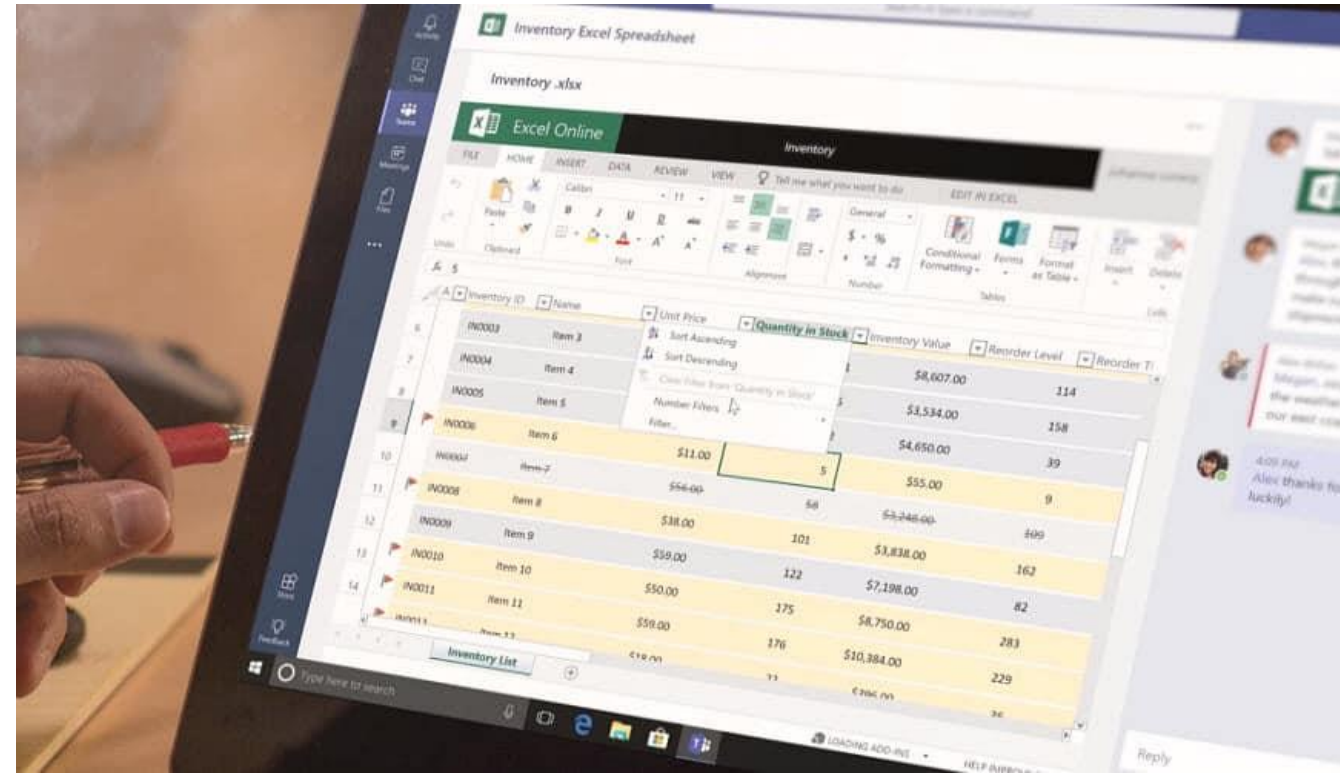

Microsoft Teams is fast replacing Skype for Business as the place for businesses to work together and collaborate. Its video conferencing features already outperform the former, and new features are added to it every week.

Teams is more than a Skype replacement. It brings everything together from your SharePoint and document systems, to your company communications and projects.

Lucidity have integrated Teams with our local telephony providers to bring conferencing and PSTN telephony directly in to Teams.

We offer the one stop solution to get your business up and running quickly and successfully on Teams.

Lucidity Implementation Consultants are ready to plan and deploy this exciting new technology successfully in to your business.
